REALMS: A JOURNEY TOWARDS HEALTHIER SOILS, ENVIRONMENT AND FOOD

SNV | Contact: Rowena Namatovu, rnamatovu@snv.org | Find out more here

Kenya & Rwanda

Regenerative agriculture can help restore soil health, enhance biodiversity and build more resilient food systems. REALMS promotes a shift towards farming practices that work with nature, including crop diversification, soil cover, living roots, integrated livestock and nature-based pest control.

The initiative supports farmers in adopting these practices while connecting them with SMEs, markets and policymakers to create an enabling environment for regenerative agriculture.

REALMS illustrates how changing the way we think about agriculture can help recognise biodiversity not as something separate from food production, but as an essential foundation for healthy soils, productive farms and resilient food systems.
